

PROFESSOR GREEN

SOIL PENETRATOR

Are your plants or yard choking to death from natural occurring salts?

- Flushes Dangerous Salts from Root Zone
- Naturally Increases Water Absorption
- Increases Micronutrients in the Soil

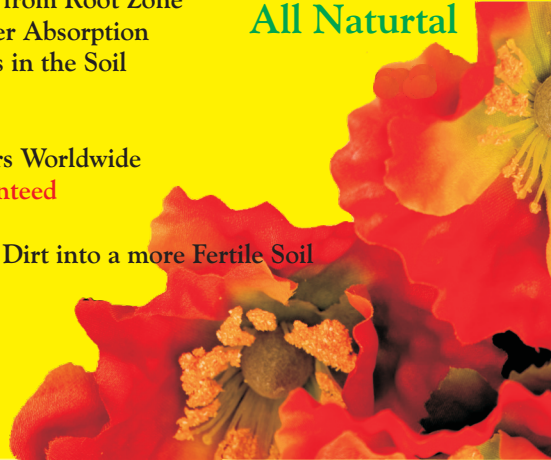

All Natural

Agricultural Grade
Recommended by Farmers Worldwide
100% Satisfaction Guaranteed

Transforms Clay or Hard Dirt into a more Fertile Soil

Net 32 fl oz (1 qt / 946 ml)

Since 1974 commercial growers have used Western Nutrients Corp. products to achieve increased quality and higher yields in fruit and vegetables, increased flower production, healthier turf and hardier perennials. What was previously available only to commercial growers is now available to you as Professor Green Complete Line of products, tested by universities and farmers worldwide. Professor Green is an all naturally soluble series of products, containing the same highly concentrated nutrients, micronutrients, proteins, vitamins, and minerals used successfully by farmers worldwide.

Natural occurring salts may build around the root system during dry or drought periods causing stress or death. Is your yard discolored? Are your plants turning yellow and brown? If so, you may have a salt problem. Treat your plants or yard with Professor Green Soil Penetrator. Then water your plants or yard vigorously and the salts will be flushed away. Great on newly sodded yards, giving the roots a good healthy foundation and start.

Professor Green is farmer tested, used, and approved

DIRECTIONS FOR USE

**-CAUTION-
CONCENTRATED AG STRENGTH
PLEASE FOLLOW DIRECTIONS
LESS IS BETTER**

Tree I.V. Root Feeder: Add ½ ounce with a 5 gallon application of water in each feeder. Apply every 7-8 weeks. Water as needed between applications.

Indoor Plants: Mix ¼ to 1 oz. per gallon of water. Apply every four weeks. Water as needed, periodically flush water through the plant's container to remove excess salts that might build because of light watering and evaporation.

Garden Watering Can: 1 fluid oz. per gallon of water. Apply every four weeks, water as needed. Adjust the volume of the mixture to the garden or lawn area.

GENERAL INFORMATION

Soil Penetrator will greatly increase water penetration, flush salts away from the root zone and reduces clodding and crusting. The all important microbial activity in the soil will improve.

PRODUCED IN THE USA

GUARANTEED ANALYSIS

6.25% Polyloxy - (1, 2 - Ethanedyl),
Alpha - (nonylphenyl) - Omega - Hydroxy
